

Abstract

The invention relates to a front bonnet system of a motor vehicle with a front bonnet (1) and with encircling body parts (2, 3). The body parts (2, 3) have supporting points (4) which are flexible in the vertical direction and on which the front bonnet (1) is supported when closed. The flexible supporting points (4) are designed as a linearly encircling supporting strip (5) with a sealing strip (6) situated between the supporting strip (5) and the front bonnet (1). The front bonnet (1) has, on its side (7) facing the supporting strip (5), an absorption strip (8) which encircles it in a manner corresponding to the supporting strip (5) and can be brought to bear against the sealing strip (6).
